

COMMANDKEYBOARD UK

KVM add-ons, Article number A3200114

The CommandKeyboard combines a standard keyboard in various international layouts with additional programmable keys. The programmable keys can be assigned with any macros using dedicated software. The product behaves like a standard keyboard that is compatible with all standard devices with keyboard support. The operation of KVM products is therefore possible as well. The macros that can be stored on the programmable keys are stored directly in the keyboard's memory. No special driver software or similar is required for operation (apart from programming the keys). The dedicated software enables you to create any configuration for the programmable keys.
